Using VantageCrypto modular API data

VantageCrypto provides a new way to ingest API data for crypto markets.

- User can choose the data they want
- User can choose how much of the data they want
- User can pay for just the data they need

Learn about our subscription interface through this video

To understand how our intuitive API structure works you can refer to our API reference data here> [API REFERENCE](#)

Below is a quick video on using the API interface via https

It is also important to understand the data that you are seeing when pulling API data. Below is a list of resources that can be used to help you understand what our data is and how to visualize it.
